Why choose Axxon Consulting

1. Expert resources close to your business

We provide service, expertise and local support and an extensive resources network to access to multi-companies and multinational implementation projects.

3. Preparation and expertise

Our experts possess a balanced combination of business process knowledge and the latest systems technologies. They work closely with Microsoft product teams to assist in the development of integration strategies and to discover new ways of doing and new products that can add value to our customers

5. Solutions tailored to your company

Our goal is to provide software and services that meet your needs without exceeding your budget. We encourage our customers to choose standard solutions, well documented and a good price-performance relation, more than customize every facet of the software. When customizations are necessary, our development team can tailor the Integrated Standard Management Microsoft Solution to cover the specific requirements of your industry and the needs of your business processes.

2. Better support and quality services

Axxon Consulting has invested in a strong internal technical structure, offering several service packages designed to meet your support requirements. As a Gold Certified Partner, we have additional resources to ensure that you receive the level of support you need, when and where you need it.

4. A success history

Following the methodology of Axxon Consulting, validated by experience, our experts have successfully completed over a hundred implementations of ERP and CRM. With Axxon Consulting, you can expect a safe implementation, no deviations of time and budget and a solution that meets the requirements of your company.

6. Higher added value for integrated innovation

By integrating Microsoft classic technology with ERP software and Microsoft Dynamics CRM, Axxon Consulting enables existing customers get the most out of Microsoft products.

7. ROI (Returns of investment) Rapid and measurable

Our solutions have helped our clients to significantly increase their revenue, reduce staff and labor costs, and save time and check other measurable returns on investment.
